#	Linux command	Purpose
1	whoami	Shows the current username
2	id	Shows user ID, group memberships, and privileges
3	pwd	Shows the current directory
4	ls -la	Lists all files, including hidden files
5	cd /path	Changes directories
6	cat filename	Displays a file's contents
7	less filename	Views a file page by page
8	grep "text" filename	Searches for text in a file
9	find /path -name "filename"	Finds files by name
10	sudo command	Runs a command with elevated privileges
11	man command	Opens a command's manual
12	command --help	Shows command help
13	history	Displays shell command history
14	cat /etc/passwd	Lists local user accounts
15	cat /etc/group	Lists local groups

16	getent group sudo	Lists members of the sudo group
17	getent group wheel	Lists members of the wheel group
18	sudo passwd USERNAME	Changes a user's password
19	sudo passwd -l USERNAME	Locks a user's password
20	sudo usermod -L USERNAME	Locks password-based login for a user
21	sudo chage -l USERNAME	Displays password aging information
22	who	Shows logged-in users
23	w	Shows logged-in users and their activity
24	last	Displays recent login history
25	lastb	Displays recorded failed logins, if available
26	ls -l	Displays file permissions and ownership
27	stat filename	Shows detailed file information
28	sudo chown USER:GROUP filename	Changes file ownership
29	chmod 644 filename	Gives owner read/write access and others read access
30	chmod 600 filename	Restricts file access to its owner

31	chmod 700 directory	Gives the owner full directory access
32	find / -type f -perm -002 2>/dev/null	Finds files writable by everyone
33	find / -type f -perm -4000 2>/dev/null	Finds setuid files
34	sudo find / -type f -perm /6000 2>/dev/null	Finds setuid and setgid files
35	cat /etc/os-release	Identifies the Linux distribution
36	uname -a	Shows kernel and system information
37	sudo apt update	Refreshes package lists on Debian/Ubuntu
38	apt list --upgradable	Lists packages with available upgrades
39	sudo apt upgrade	Upgrades installed packages
40	dpkg -l	Lists installed Debian/Ubuntu packages
41	sudo apt purge PACKAGE	Removes a package and its configuration files
42	snap list	Lists installed Snap packages
43	systemctl --type=service --state=running	Lists running services
44	systemctl --failed	Lists failed services
45	systemctl status SERVICE	Checks a service's status

46	systemctl is-enabled SERVICE	Checks whether a service starts automatically
47	sudo systemctl disable SERVICE	Prevents a service from starting automatically
48	sudo systemctl stop SERVICE	Stops a running service
49	systemctl list-unit-files --type=service	Lists installed service unit files
50	ip addr	Shows network interfaces and IP addresses
51	ip route	Displays routing information
52	sudo ss -tulpn	Shows listening network ports and associated processes
53	sudo ufw status verbose	Checks firewall status and rules
54	sudo ufw enable	Enables the UFW firewall
55	sudo ufw status numbered	Lists numbered firewall rules
56	sudo ufw deny PORT	Blocks a port using UFW
57	hostnamectl	Displays system hostname and related information
58	getent hosts example.com	Tests hostname resolution
59	find /home -type f -name ".*"	Finds hidden files in home directories

60	find /tmp -type f	Lists files in /tmp
61	find /var/tmp -type f	Lists files in /var/tmp
62	find / -type f -mtime -1 2>/dev/null	Finds files modified within the last day
63	grep -Rni "NOPASSWD" /etc/sudoers /etc/sudoers.d 2>/dev/null	Searches sudo configuration for passwordless rules
64	sudo visudo -c	Checks sudoers configuration syntax
65	crontab -l	Lists the current user's scheduled jobs
66	sudo ls -la /etc/cron.d /etc/cron.daily	Inspects system cron directories
67	journalctl -p warning	Displays warnings and more severe system messages
68	journalctl -u SERVICE	Displays logs for a particular service
69	sudo journalctl -b	Displays logs from the current boot
70	sudo tail -n 100 /var/log/auth.log	Displays recent authentication logs on systems using this file
71	sudo grep -i "failed" /var/log/auth.log	Searches authentication logs for failures
72	dmesg -T	Displays kernel messages with readable timestamps
73	sudo nano /etc/ssh/sshd_config	Opens the SSH server configuration for editing

74	sudo sshd -t	Checks SSH server configuration syntax
75	sudo systemctl status ssh	Checks SSH service status on many Ubuntu systems
76	grep -E 'PASS_MAX_DAYS|PASS_MIN_DAYS|PASS_WARN_AGE' /etc/login.defs	Checks default password aging settings
77	grep -vE '^\s*(#|$)' /etc/ssh/sshd_config	Displays non-comment SSH configuration lines
78	sudo visudo	Safely edits sudo permissions
79	ps aux	Lists running processes
80	top	Monitors processes and resource usage
81	pgrep -a PROCESS	Finds processes by name
82	free -h	Displays memory usage
83	df -h	Displays disk space usage
84	du -sh DIRECTORY	Displays a directory's total size
85	uptime	Displays system uptime and load
86	sudo lsof -i -P -n	Lists network connections and associated processes if lsof is installed
87	lsblk	Lists storage devices

88	sudo ufw status	Checks firewall status
89	sudo ss -tulpn	Checks listening network ports
90	sudo visudo -c	Validates sudo configuration
